

SENG 513 Assignment 1

2.1: Identify and explain the mobile strategy used.

The default styling used was for larger screens and media queries were used to change some styles for smaller screens. The use of flexbox and grid is adjusted based on screen width to ensure proper responsiveness.

2.2. Identify and explain how you used grids and flexbox.

Grid: In the `#features` section, CSS Grid is used to create a layout where two `article` elements are side-by-side on larger screens using `grid-template-columns: 1fr 1fr`. The grid-based layout helps ensure that both features remain aligned and evenly spaced on larger screens.

Flexbox: Flexbox is used in various places.

2.3 Identify and explain the use of Selectors, Pseudo-classes and Pseudo-elements.

I used class id and element selectors

I also used hover for buttons which is a pseudoclass

I used `::firstline` for pseudo elements

2.4. Identify and explain the image resizing methods used.

the background image size is changed according to screen size and to make sure it responds properly to size changes.

2.5. Identify and explain the CSS rules you used.

i used basic css rules like for font size colors and type and buttons, border styling and many more

2.6. Identify and explain the corrections you made to the HTML page

Some corrections were made to the html for styling and aesthetic purposes
